

# X-Tra Power™

Increased reproductive growth and controlled vegetative growth

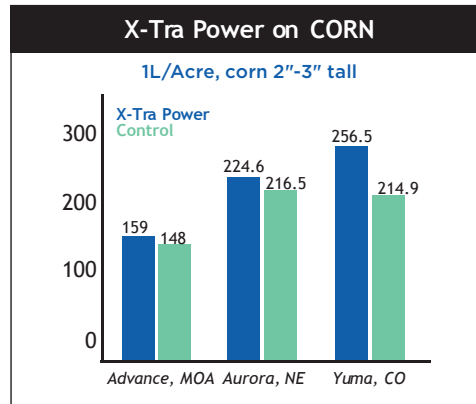

## X-TRA POWER

- Corrects micronutrient concerns
- Promotes female flower production
- Promotes plant vigor during the earliest stages of plant development
- Enhances root growth & stem diameter
- Increases seedling vigor
- Increases weather/stress tolerance
- Reduce need for phosphate application

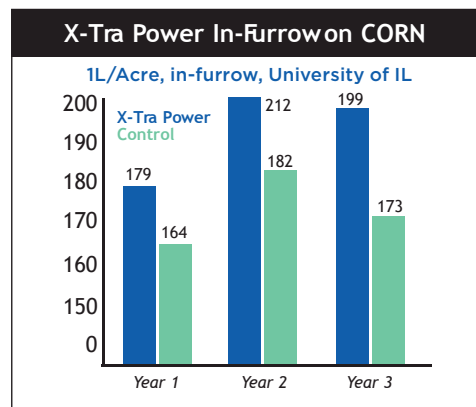

X-TRA POWER can be applied in starter solutions, transplant solutions or in-furrow programs at the rate of 1-2 litres per acre. X-TRA POWER'S mixture of growth-enhancing co-factors has been selectively balanced to promote vigorous root growth while the plant is in the infant stage.

## X-TRA POWER

- Mixes with herbicides and insecticides
- Mixes with pop-up fertilizers
- Is water soluble and will be taken up by the plant roots and seed without phytotoxicity when used as directed
- Will precondition the crop to better tolerate adverse weather conditions such as cold and hot weather, drought and flooded conditions when used as directed

**20.2 bu/ac increase average**

**22.5 bu/ac increase average**

Stoller products optimize plant genetic expression by bolstering natural plant tolerance to adverse weather, herbicide and other stresses. STOLLER® brand products will help increase your marketable yield, and profit.
